—  
**A revolution in fragrance creation.** *The last major innovation was in 1874 when Symrise created the first synthetic ingredient.*

—  
**Entering the digital age for the perfume industry.** *PHILYRA contains an archive of almost 2000 formulas and historical data ; she then uses machine learning to generate new fragrance formula combinations that achieve innovative and disruptive results*

—  
**The model combines machine intelligence but relies on perfumers' expertise** *to marry consumer preferences and product design with PHILYRA's formulas*
